

# Seoyeong Kim

iOS developer structuring problems into products teams can understand together

Public CV · Updated July 2026

[Current Web CV](#) · [GitHub](#)

This public summary contains only information suitable for publication. The Web CV is the source of truth for current experience and project details.

## Profile

I turn user problems into explicit data and product flows, and help teams share the same reasoning. Chemical engineering research, community operations, and iOS team projects taught me to explain evidence and leave structures others can continue.

## Experience

**2026-Present** Learner · Apple Developer Academy @ POSTECH

Learning user problem framing, data responsibilities, and shared team understanding through SwiftUI prototypes, a nearby multiplayer game, and a record service.

**Jul-Nov 2025** Flutter and Java learning communities

Joined a Flutter project study, organized a Java study, and completed the Woowacourse Precourse assignments.

**Mar 2022-Aug 2025** Leadership · SCUTTA, University of Seoul table tennis club

Connected training, events, content, accounting, and operating tools while serving as training lead, president, publicity lead, and treasurer.

**Sep 2024-Aug 2025** Work-experience intern · University of Seoul Wellness Center

Supported member service and outdoor tennis court operations.

**Jun-Aug 2024** Research intern · CCMD Laboratory, University of Seoul

Reviewed ammonia decomposition catalyst research and supported analysis of VASP simulation results.

**Mar-Dec 2023** Chemistry tutor · Department of Chemical Engineering

Tutored first-year students in Chemistry and Experiment I and II.

## Education

Chemical Engineering, University of Seoul · Mar 2022-Feb 2026 (as recorded in the source CV)

## Selected Projects

### Academy C1 · Onboarding guide prototype

Separated guide steps into route data and built staged navigation with `NavigationStack`.

`SwiftUI` · `Data modeling`

### Academy C2 · Benefits explorer prototype

Modeled categories and saved state, then connected discovery and collection flows with a `ViewModel` and `SwiftData`.

`SwiftUI` · `SwiftData`

### Academy C3 · BombAway

Implemented state, communication, and sensor flows for a nearby multiplayer game using `MultipeerConnectivity` and `NearbyInteraction`.

`SwiftUI` · `MultipeerConnectivity` · `NearbyInteraction`

### Academy C4 · Leaf (working title)

Separated UI and persistence responsibilities with a protocol-based service and preview implementation.

`SwiftUI` · `Service architecture`

### SCUTTA match record web service

Built and operated submission, approval, search, ranking, and participation flows. At the source CV date, it supported 128 users and 785 match records.

`Flask` · `PostgreSQL` · `JavaScript`

## Skills & Interests

- iOS: `Swift`, `SwiftUI`, `SwiftData`
- Architecture: state ownership, service boundaries, previewable structures
- Web & Data: `Python`, `Flask`, `PostgreSQL`, `JavaScript`
- Collaboration: problem framing, data-flow explanation, operational records
